

Java Arrays — LeetCode Practice Set

Designed for B.Tech CSE students • Exam + Company Placement Preparation

Problems Already Completed

LC #	Problem	Level	Link
1	Two Sum	Easy	Open Problem
1480	Running Sum of 1d Array	Easy	Open Problem
1295	Find Numbers with Even Number of Digits	Easy	Open Problem

Assignment 1 — Basic Array Logic

LeetCode 27. Remove Element — Easy

Focus: Array traversal, in-place modification

LeetCode 724. Find Pivot Index — Easy

Focus: Prefix/running sum

LeetCode 268. Missing Number — Easy

Focus: Array traversal, mathematics

LeetCode 217. Contains Duplicate — Easy

Focus: Duplicate checking

LeetCode 1672. Richest Customer Wealth — Easy

Focus: 2D array traversal

Assignment 2 — Array Manipulation

LeetCode 283. Move Zeroes — Easy

Focus: In-place array, two pointers

LeetCode 88. Merge Sorted Array — Easy

Focus: Two arrays, merging, two pointers

LeetCode 26. Remove Duplicates from Sorted Array — Easy

Focus: Sorted arrays, two pointers

LeetCode 189. Rotate Array — Medium

Focus: Array manipulation, in-place thinking

LeetCode 977. Squares of a Sorted Array — Easy

Focus: Sorted array, two pointers

Assignment 3 — Placement Level

LeetCode 121. Best Time to Buy and Sell Stock — Easy

Focus: Optimization from $O(n^2)$ to $O(n)$

LeetCode 169. Majority Element — Easy

Focus: Counting, sorting, later optimization

LeetCode 53. Maximum Subarray — Medium

Focus: Brute force vs. Kadane's algorithm

LeetCode 238. Product of Array Except Self — Medium

Focus: Prefix/suffix products

LeetCode 1572. Matrix Diagonal Sum — Easy

Focus: 2D arrays, diagonal indexing

Recommended Placement Practice Method

1. First solve using the concepts you have already learned.
2. Write down the time complexity and space complexity.
3. Look for a better approach only after completing the basic solution.
4. For selected problems, try both a brute-force and an optimized solution.
5. Dry-run the code with at least two different test cases before submitting.

High-Priority Placement Problems: Two Sum, Move Zeroes, Best Time to Buy and Sell Stock, Maximum Subarray, Merge Sorted Array, Remove Duplicates from Sorted Array, Missing Number, Majority Element, Find Pivot Index, Rotate Array.
